

■ PROMA

Project Management System

UML Use Case Diagram

Field	Details
Project Title	Proma – Project Management System
Guided By	Sagnik Patra
Institution	KIET Deemed to be University
Team Members	Suhani Kushwaha (AI Developer), Tanya Vaish (Full Stack Developer), Teena Yadav (Full Stack Developer), Umang Saluja (AI Developer)
Document Purpose	To visually represent the system's actors, their goals, and the core functionalities (use cases) offered by Proma.

1. Actors

Actor	Description
Team Lead / Project Manager	Creates and manages projects, assigns tasks, sets deadlines and milestones, manages team roles, views the progress dashboard, and collaborates via comments.
Team Member	Registers/logs in, views assigned tasks, updates task status, adds comments, and receives real-time notifications.
System Administrator	Manages user accounts, oversees team and role management, and monitors overall system health and maintenance.

2. Use Cases

Use Case	Description
Register & Login	Secure sign-up and sign-in using JWT-based authentication.
Create / Edit Project	Create, edit, or archive projects within the system.
Create & Assign Task	Create tasks and assign them to one or more team members.
Update Task Status	Team members update the progress/status of their assigned tasks.
Set Deadlines & Milestones	Define due dates and milestones, with reminders for upcoming deadlines.
View Progress Dashboard	View real-time visual analytics of project and task completion.
Add Comments & Collaborate	Add comments on tasks/projects and collaborate with the team.
Receive Notifications	Get real-time notifications for assignments, comments, and deadlines.

Manage Team & Roles	Add, remove, or change the roles of team members.
Manage User Accounts	Administer user accounts across the platform.
System Monitoring & Maintenance	Monitor system reliability, performance, and data security.
